

What's behind JOSM ?

Intro : Quick facts about JOSM

Oldest still developed: created in 2005, only one year after OSM

Most used editor since 2010 (67 % of 2018 contributions)

Feature-rich, **extensible**

Available on Linux, Windows, macOS

Translated in 36 languages

Important community

Site : <https://josm.openstreetmap.de>

Intro : Plan

1) Technologies & Extensibility

2) Project Management

3) Statistics

4) Work in progress & to come

JOSM

1. Technologies & extensibility

Core features, formats and protocols

Load, Edit, Render, Validate, Upload :

- OSM data: XML, JSON (*new in 2018-08*)
- Traces: GPX, NMEA, RTKLib (*new in 2019-08*)
- OSM notes: XML

With the help of :

- Edition/Search/Filtering/Remote control tools
- OSM presets: XML
- Mappaint styles: MapCSS
- Validation rules: Java, MapCSS
- Imagery: WMS, TMS, WMTS
- Geotagged pictures: JPG, PNG
- Audio recordings: WAV, MP3/AAC/AIF (*new in 2017-06*)

Technologies

Java 8+ / Swing

Very few dependencies

Apache Commons Compress : Bzip2, XZ compression

Apache Commons JCS: Imagery tile cache

Apache Commons Validator : Validation routines (URLs...)

SvgSalamander : SVG Support

Metadata Extractor : EXIF metadata reading of geotagged pictures

Signpost : OAuth authentication

Jsonp: JSON support

* opening_hours.js: opening_hours syntax

* overpass-wizard: Overpass API wizard

* = JavaScript libraries at risk

Extensions : plugins

More than 100 plugins adding for example:

- New data formats/ protocols :
 - *pbf, o5m, geojson, opendata* (csv, ods, xls, shapefile, kml...), *http/2* (exp.)
- New advanced tools :
 - *reverter, undelete, utilsplugin2, conflation, piclayer, todo, tag2link, ...*
 - *building_tools, turnlanes, turnrestrictions, measurement, terracer, ...*
- Integration with ecosystem :
 - *Mapillary, Streetside, Wikipedia, Imagery_offset_db*
- Specialized/national/fun tools :
 - *Cadastrefr, austriaddresshelper, SeaChart, Kendzi3D, geochat*
- Java libraries required by other plugins :
 - *Apache-commons, ejml, geotools, javafx, jaxb, jna, jogl, jts, log4j*

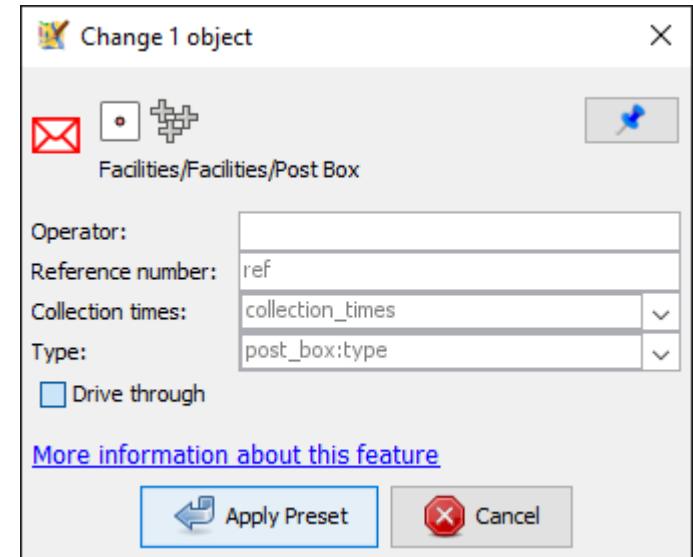

<https://josm.openstreetmap.de/wiki/DevelopersGuide/DevelopingPlugins>

Extensions : presets (XML)

```
<item name="Post Box" icon="presets/service/post_box.svg" type="node" preset_name_label="true">
  <link wiki="Tag:amenity=post_box" />
  <space />
  <key key="amenity" value="post_box" />
  <text key="operator" text="Operator" />
  <text key="ref" text="Reference number" />
  <combo key="collection_times" text="Collection times" delimiter="/" values="Mo-Sa 09:00/Mo-Fr 17:30" />
  <combo key="post_box:type" text="Type" values="pillar,Lamp,wall,meter" values_context="post_box" />
  <check key="drive_through" text="Drive through" />
</item>
```

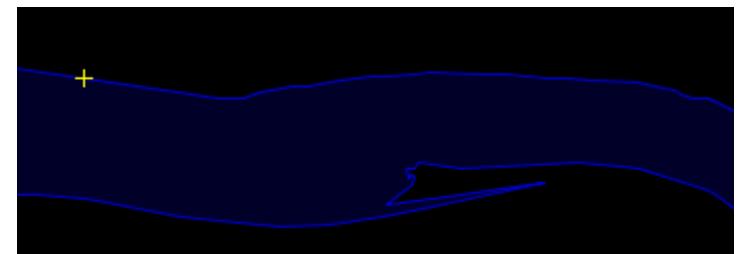

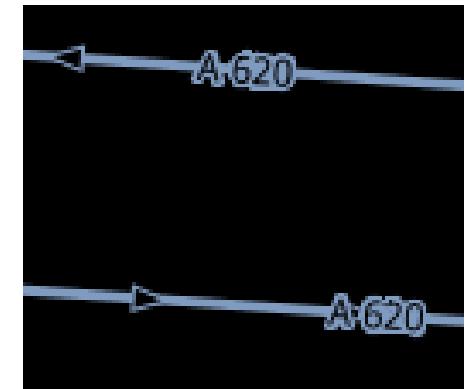

Simple syntax, stable for years, detailed below:

<https://josm.openstreetmap.de/wiki/TaggingPresets>

Extensions : styles (MapCSS)

```
node[amenity=post_box] {  
    icon-image: "presets/service/post_box.svg";  
    set icon_z17;  
}  
  
way|z18-[highway=motorway][setting("highway_labels")]  
way|z18-[highway=trunk][setting("highway_labels")]{  
    text: auto;  
    text-color: black;  
    font-size: 10;  
    text-position: line;  
    text-halo-opacity: 1;  
    text-halo-radius: 1.5;  
}  
  
area[waterway=riverbank] {  
    fill-color: riverbank#0000cf;  
    width: 1;  
    color: riverbank#0000cf;  
}
```

Very powerful syntax continuously improved, detailed below:

<https://josm.openstreetmap.de/wiki/Help/Styles/MapCSSImplementation>

Extensions : validation (MapCSS)

```
way[waterway][oneway?] {
    throwWarning: tr("{0} is unnecessary for {1}", "{1.key}", "{0.key}");
    group: tr("unnecessary tag");
    fixRemove: "{1.key}";
}

*[addr:street =~ /(?i).*Strasse.*/][addr:street !~ /(?i).*Strasser.*/]
[inside("DE,AT")],
*[name =~ /(?i).*Strasse.*/][name !~ /(?i).*Strasser.*/][inside("DE,AT")] {
    throwError: tr("street name contains ss");
    assertMatch: "way name=Hauptstrasse";
    assertNoMatch: "way name=Hauptstraße";
    assertNoMatch: "way name=Kapitän-Strasser-Straße";
    assertNoMatch: "way name=Peter-Strasser-Platz";

}
*[addr:street =~ /(?i).*Straße.*/][inside("LI,CH")],
*[name =~ /(?i).*Straße.*/][inside("LI,CH")] {
    throwError: tr("street name contains β");
    assertMatch: "way name=Hauptstraße";
    assertNoMatch: "way name=Hauptstrasse";
}
```

Syntax similar to rendering MapCSS, with a few validator extensions:

<https://josm.openstreetmap.de/wiki/Help/Validator/MapCSSTagChecker>

JOSM

2. Project Management

Current team

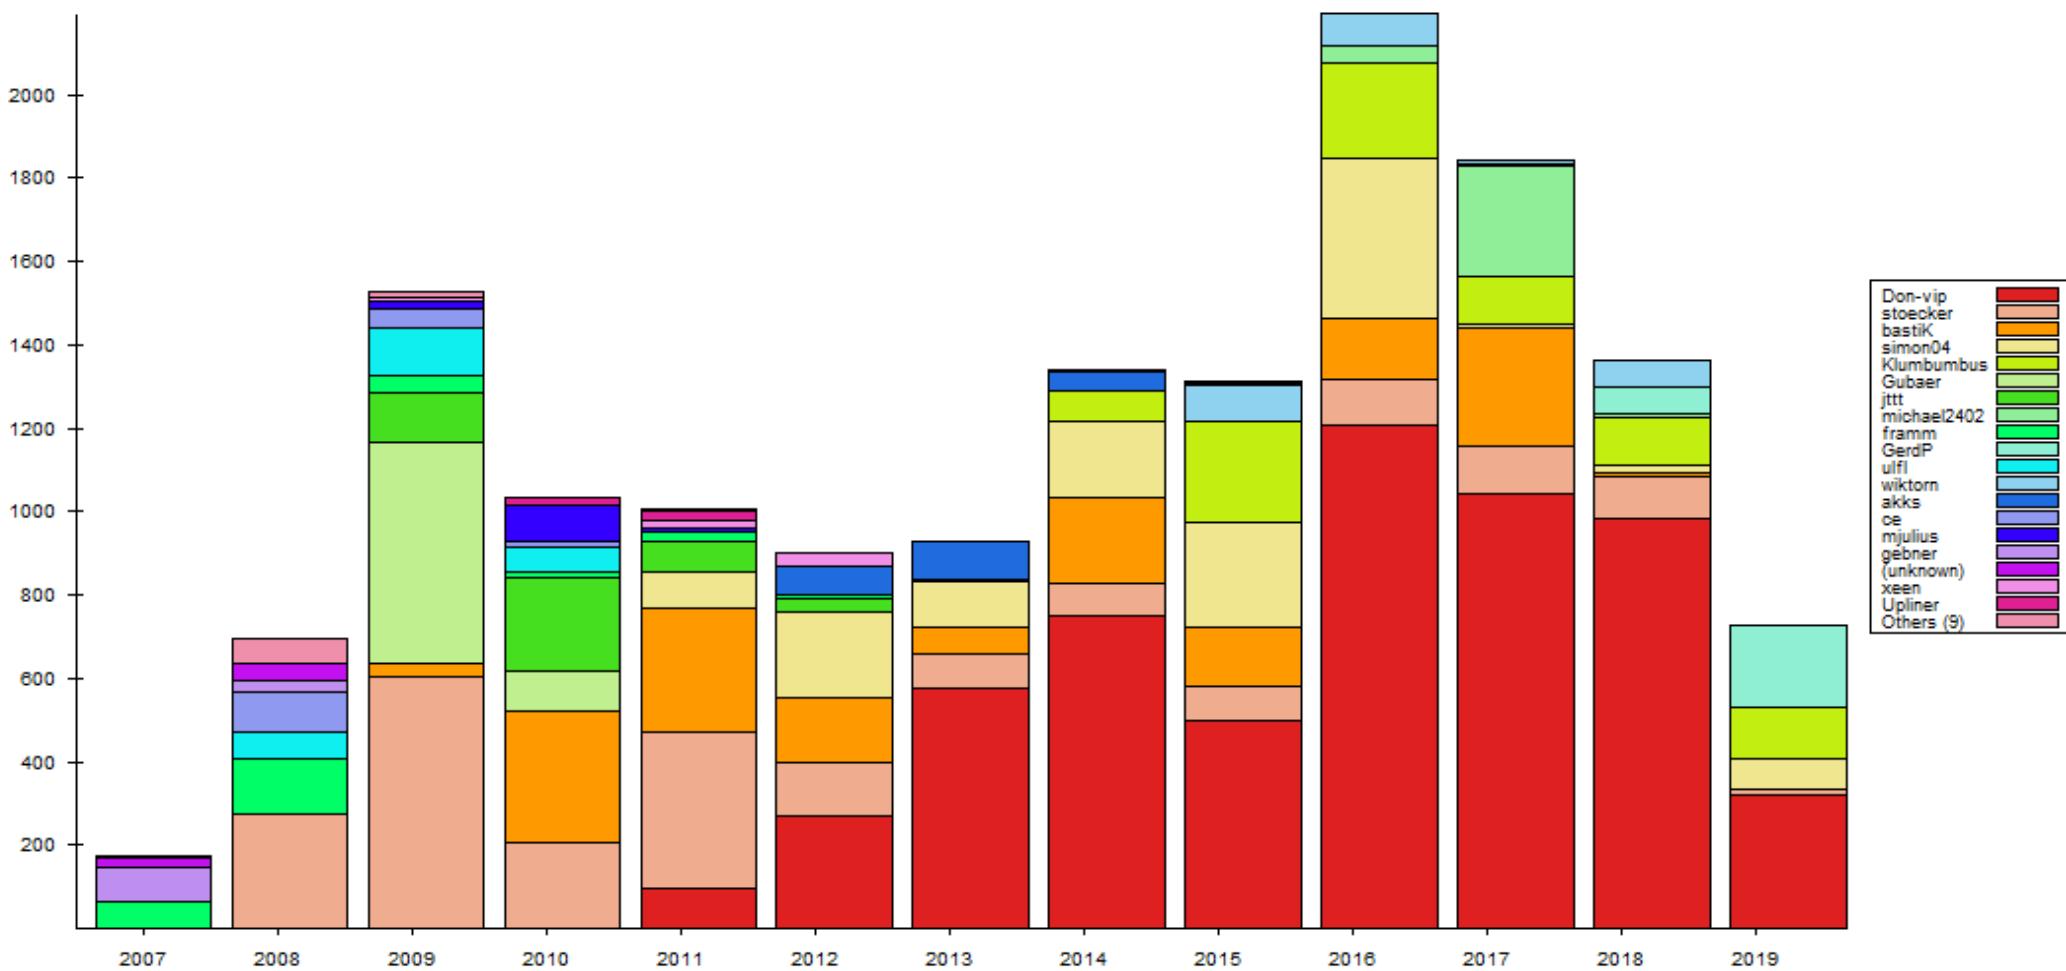

[2018-2019] : **9 developers** (~2000 commits) :

Vincent, Gerd, Stefan, Dirk, Simon, Wiktor, Paul, Michael, Florian

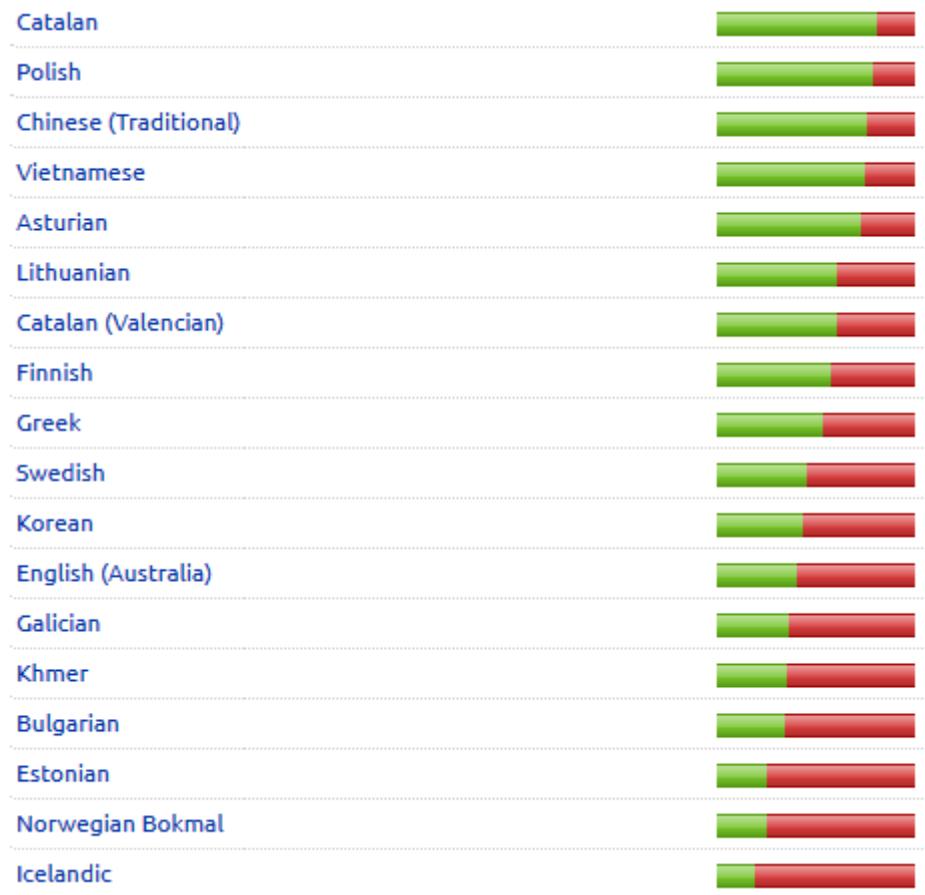

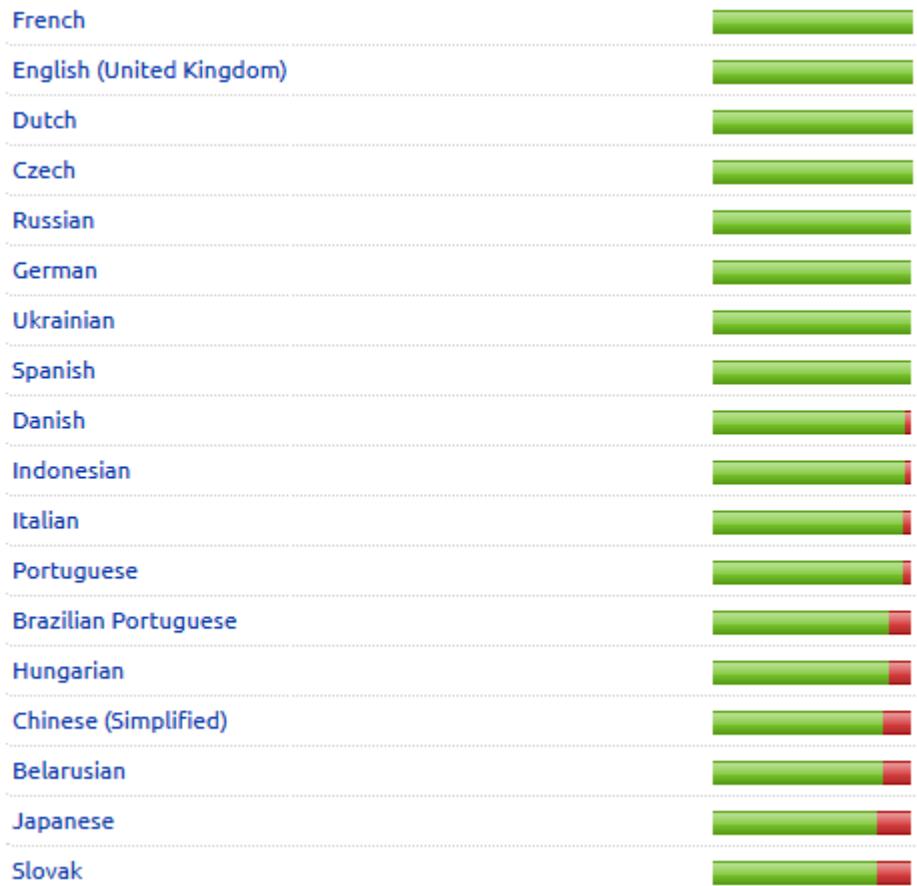

Historic team

[2005-2019] : 29 developers have contributed (15351 commits)

Translation teams

[2005-2019] : 1000+ translators have contributed (36 langs, 11000+ strings)

Development cycle

1 release *latest* each night (3am CEST)

1 release *tested* ~ last Sunday of each month

Tests OK, no known regression, translations up to date

N releases *hotfix* – for critical bug / external problem (API, Debian...)

Distribution modes

Java WebStart (preferred) : light, fast, multi-platform

Windows Installer (NSIS) / macOS package

Jar file / scripts

Ubuntu PPA / Linux native packages (Debian, Ubuntu, etc.)

Governance

Independent project

Benevols / not on behalf of OSMF, WG, local chapters, private companies...

But some sponsoring (direct / indirect)

OSM community before all

Everything is publicly discussed on the bugtracker

Anonymous tickets allowed, even if we prefer when they're not :)

We don't create tags ourselves!

Presets choices guided by OSM wiki, Taginfo, @tagging mailing list, etc.

Java migrations performed if transparent for > 90 % of our user base

Direct sponsors: JOSM core

Hetzner : server / 2013-2019

Google : Summer of Code / 2015-

Google Summer of Code

FOSSGIS : code signature certificate / 2016-

server / 2019-

JetBrains : IntelliJ IDEA licences / 2016-

YourKit : Java Profiler licences / 2018-

Indirect sponsors: JOSM plugins & extensions

Skobbler/Telenav : plugins *TurnRestriction*,
OpenStreetCam, *ImproveOsm*, *GeoHash*...

Apple : *Atlas* plugin / 2017-

Microsoft : *StreetSide* plugin / 2018

GitHub/DigitalOcean : HacktoberFest / 2018,
GeoJson plugin

Mapillary: *Mapillary* plugin / 2019-

JOSM server: services

Project website (Trac): <https://josm.openstreetmap.de>

Tickets system (bugs, feature requests, admin tasks)

SVN repository: <https://josm.openstreetmap.de/svn>

Online help (multilingual wiki)

Message of the Day, changelog

JOSM extensions (plugins, imagery, styles, presets)

Jenkins, SonarQube, Nexus, PPA Ubuntu

70,000 visitors, 400 Gb/month (without bots)

Continuous Integration

Jenkins : Unit tests / integration OpenJDK 8, 11, 12, 13-ea, 14-ea

Integration tests with ecosystem:

APIs: OSM, Mapillary, Wikipedia, Wikidata...

Popular tag handling (> 10,000 in Taginfo)

TLD (IANA) for URL validation, ELI synchronisation...

Daily check of:

Translations (double quotes): we fix them

Internal extensions (official plugins, styles/presets on JOSM wiki): we fix them

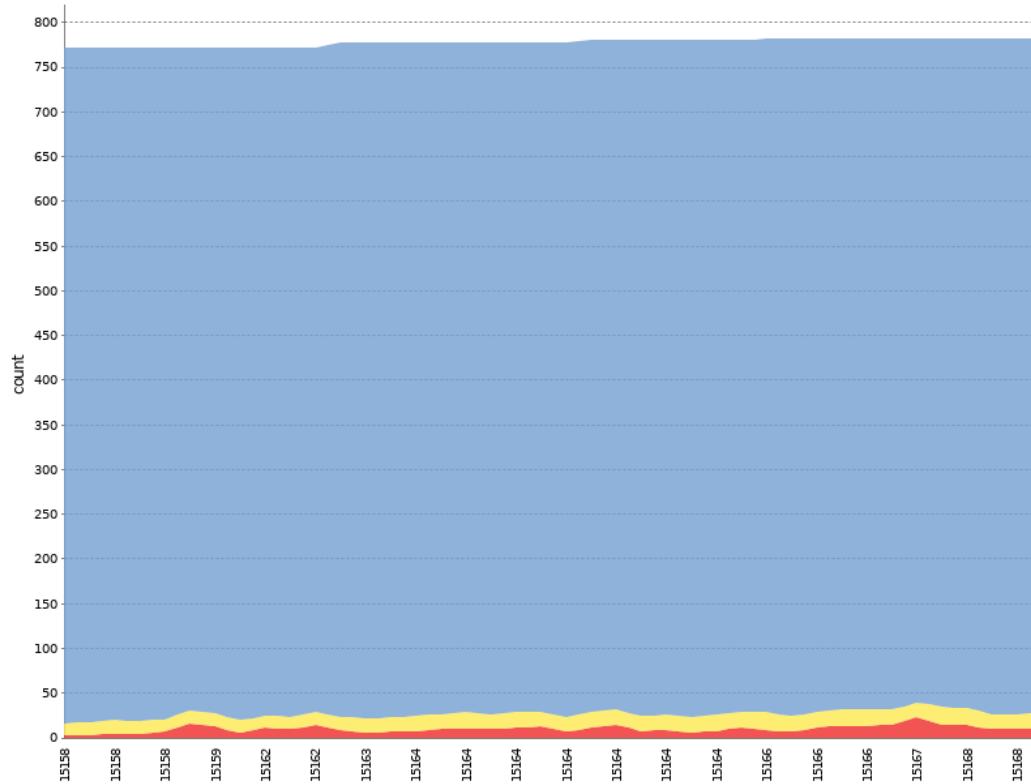

External extensions (often on GitHub): we report, sometimes PR, otherwise blacklist

Travis CI / AppVeyor: Linux, macOS, Windows

Checking of imagery sources validity

~800 sources are checked daily

Ungrateful work of reporting errors and fishing for information

Vincent Privat (@VincentPrivat · 4 mai)
@PDOK_online we can't access this link anymore, is the NGR down?
nationalgeoregister.nl/geonetwork/srv...

Vincent Privat (@VincentPrivat · 6 mai)
@Agenzia_Entrate we can't access WMS service anymore:
wms.cartografia.agenziaentrate.gov.it/inspire/wms/ow... returns no content

Vincent Privat (@VincentPrivat · 11 mai)
@GovSC where can we find the "Termo de utilização dos dados do SIGSC"? It was previously available at sigsc.sds.sc.gov.br/download/termo... but the link is dead since a few days.

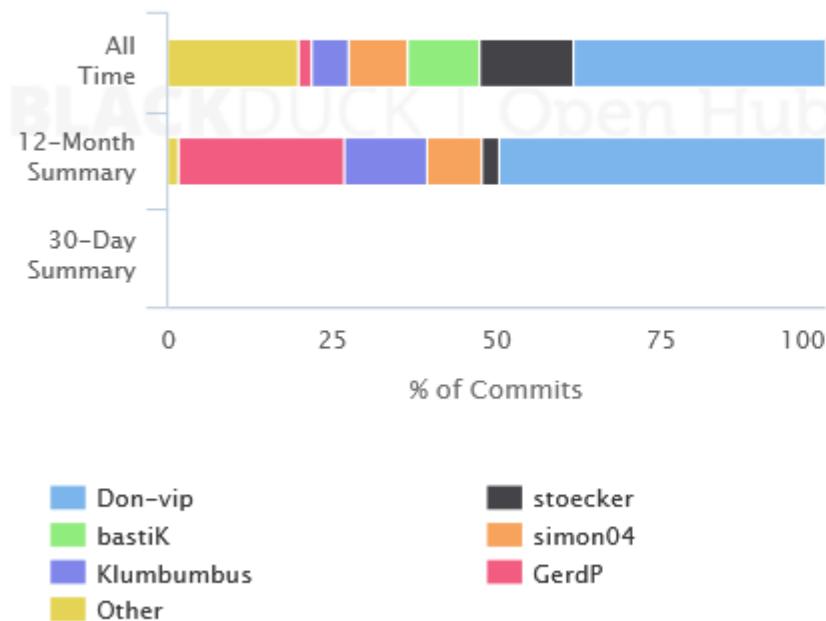

JOSM

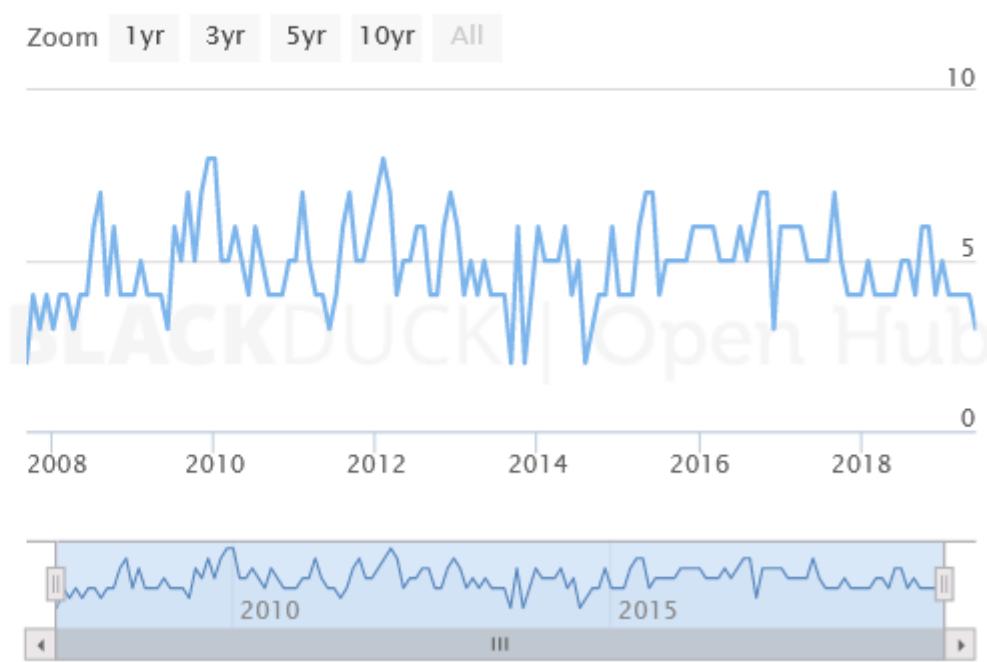

3. Statistics

Statistics : contributors [2007-2019]

Commits by Top Contributors

Number of Contributors

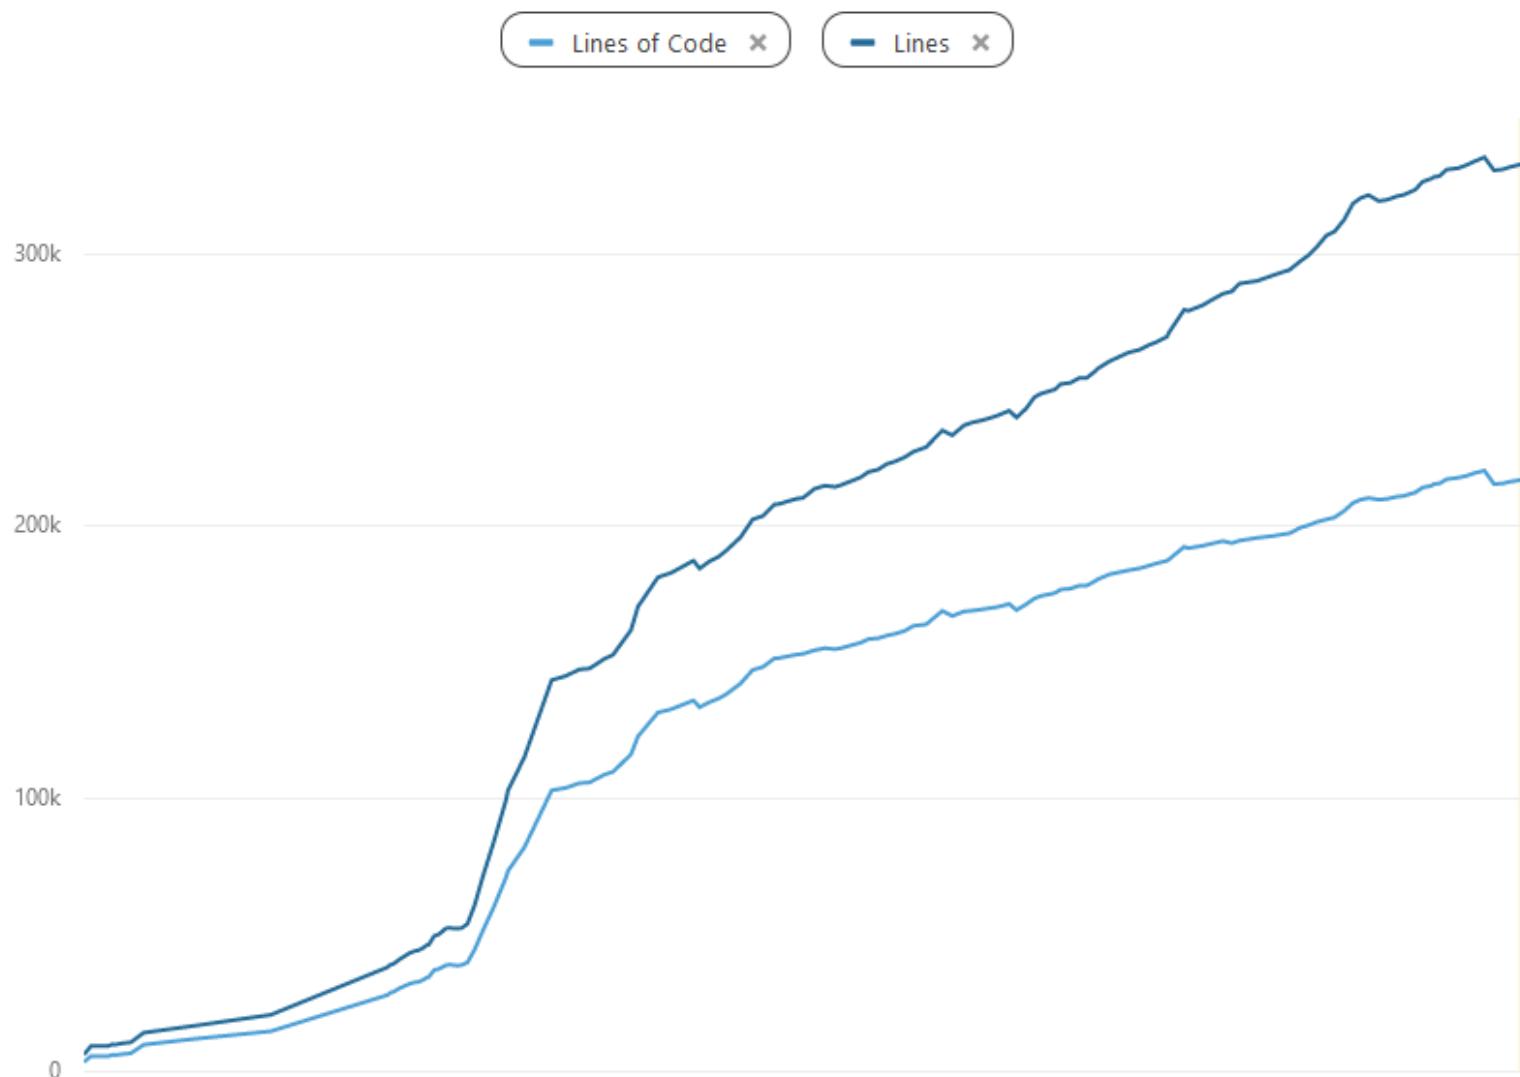

Usually about 4/5 people contributing to JOSM each month

Since 2007, never less than 2 people!

<https://www.openhub.net/p/josm>

Statistics : lines of code [2005-2019]

2005-10 :

5,912 lignes

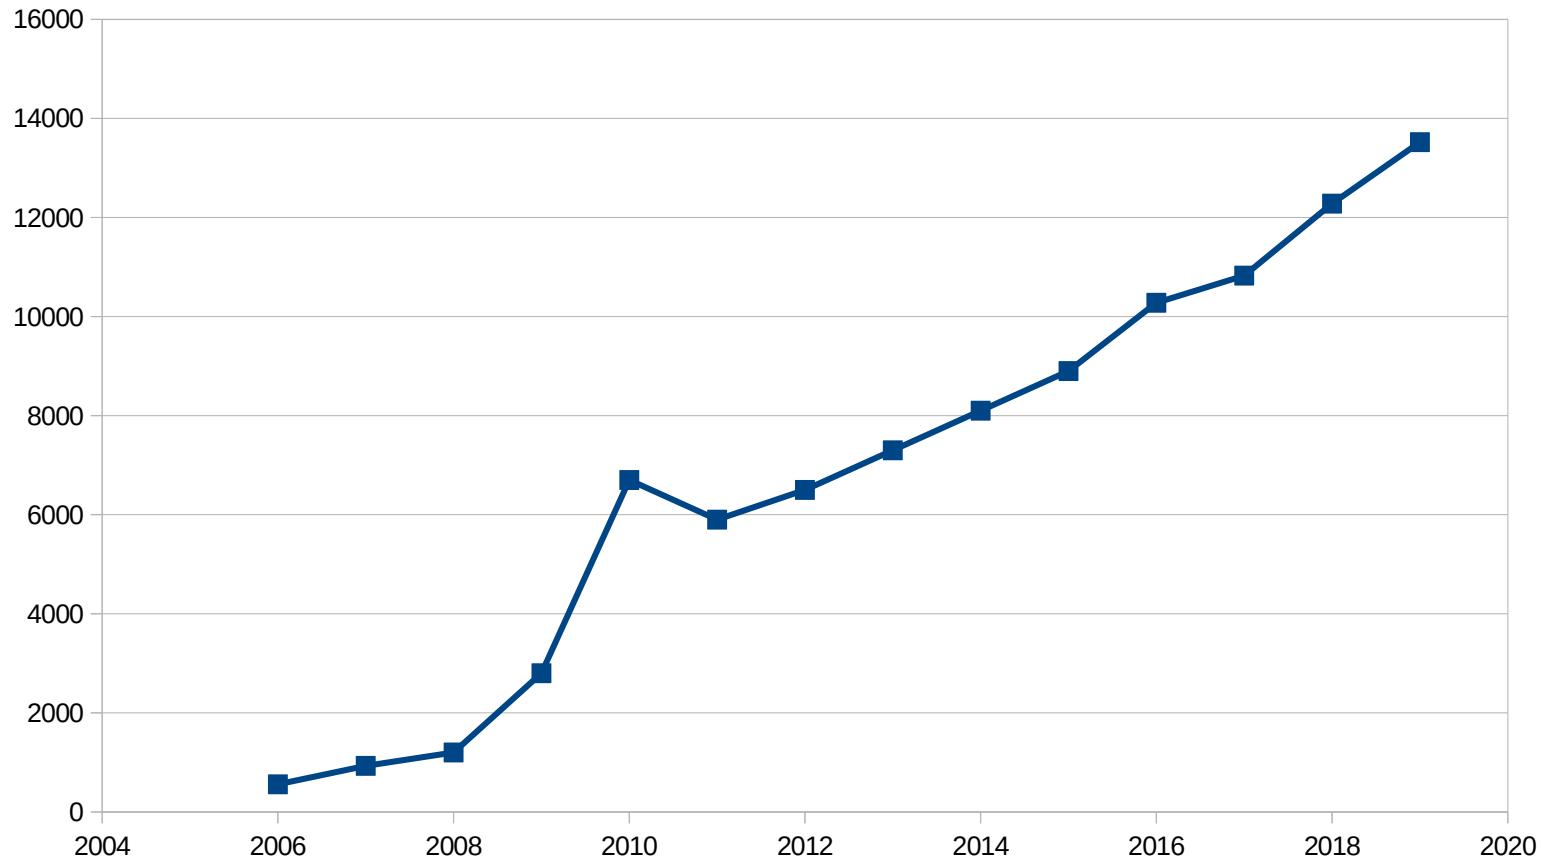

3,205 loC

2019-06 :

333,751 lignes

217,526 loC

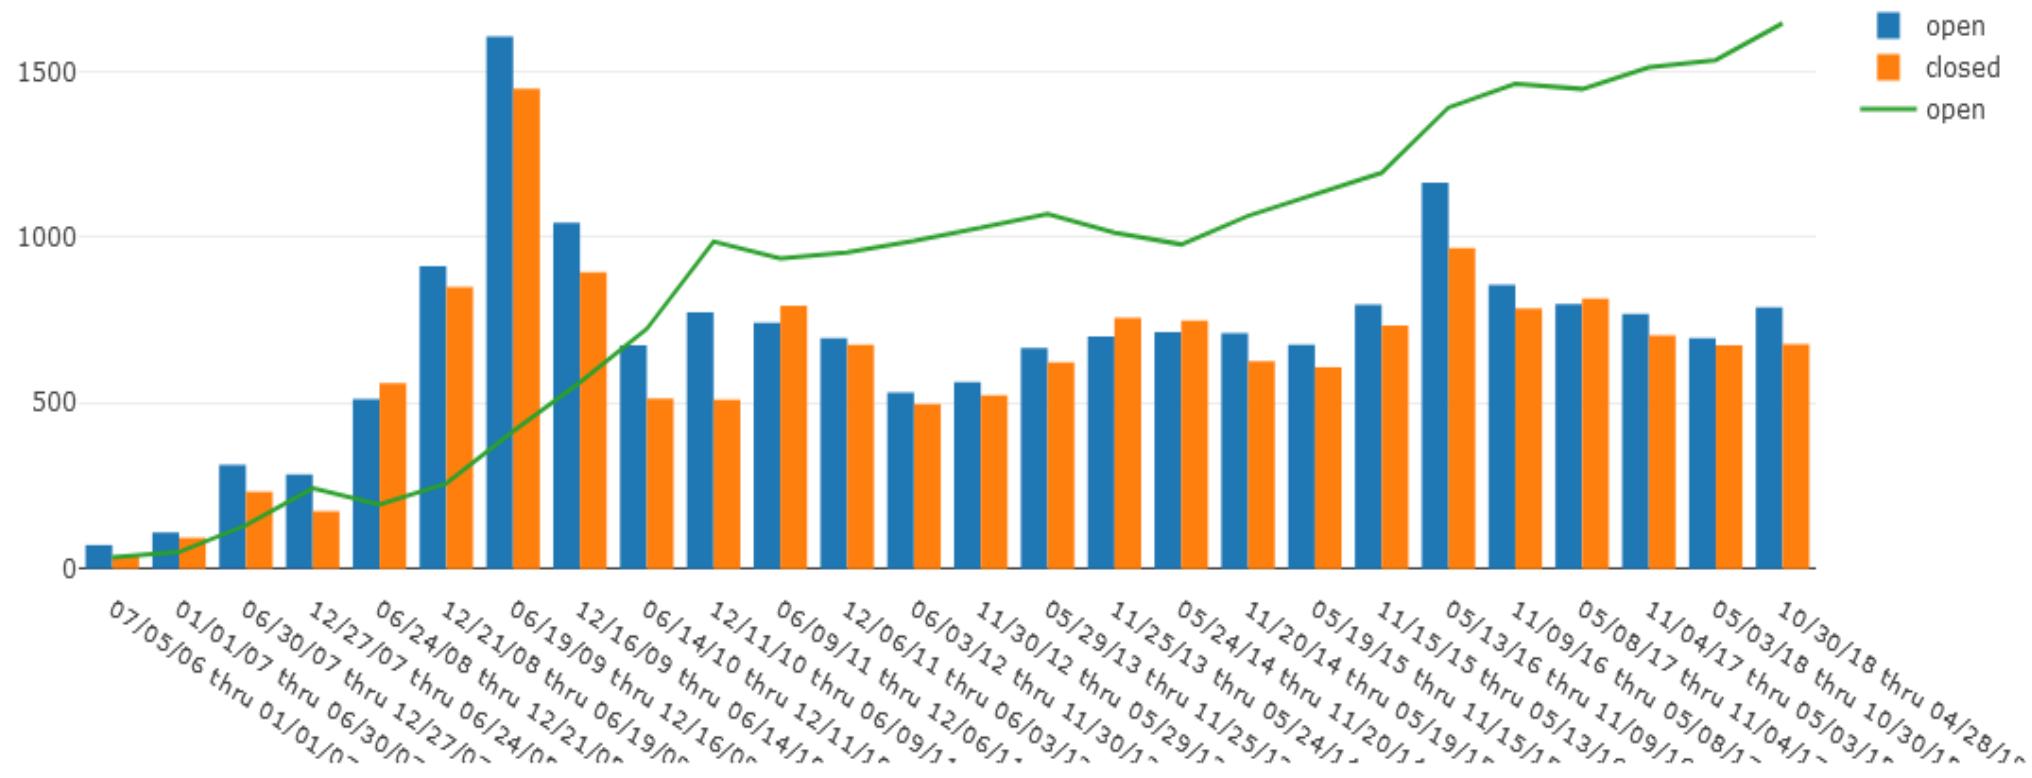

Statistics : binary size (Kb)

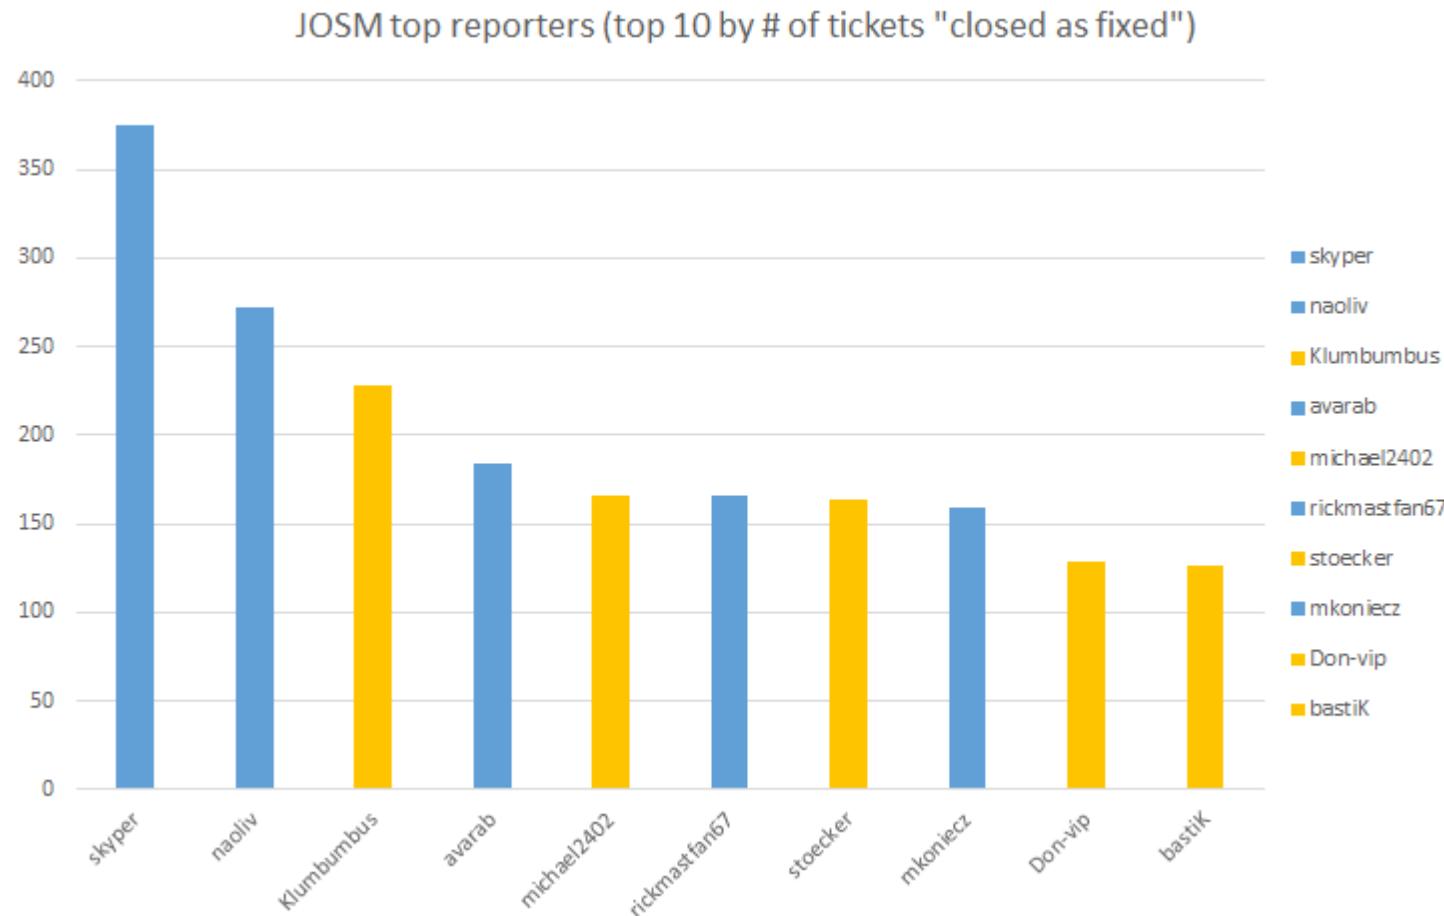

~1 Mb/year:
Code
Icons
Presets
Translations

2011 : Goodbye XML styles, hello MapCSS :)

Statistics : tickets [2007-2019] (bi-annual)

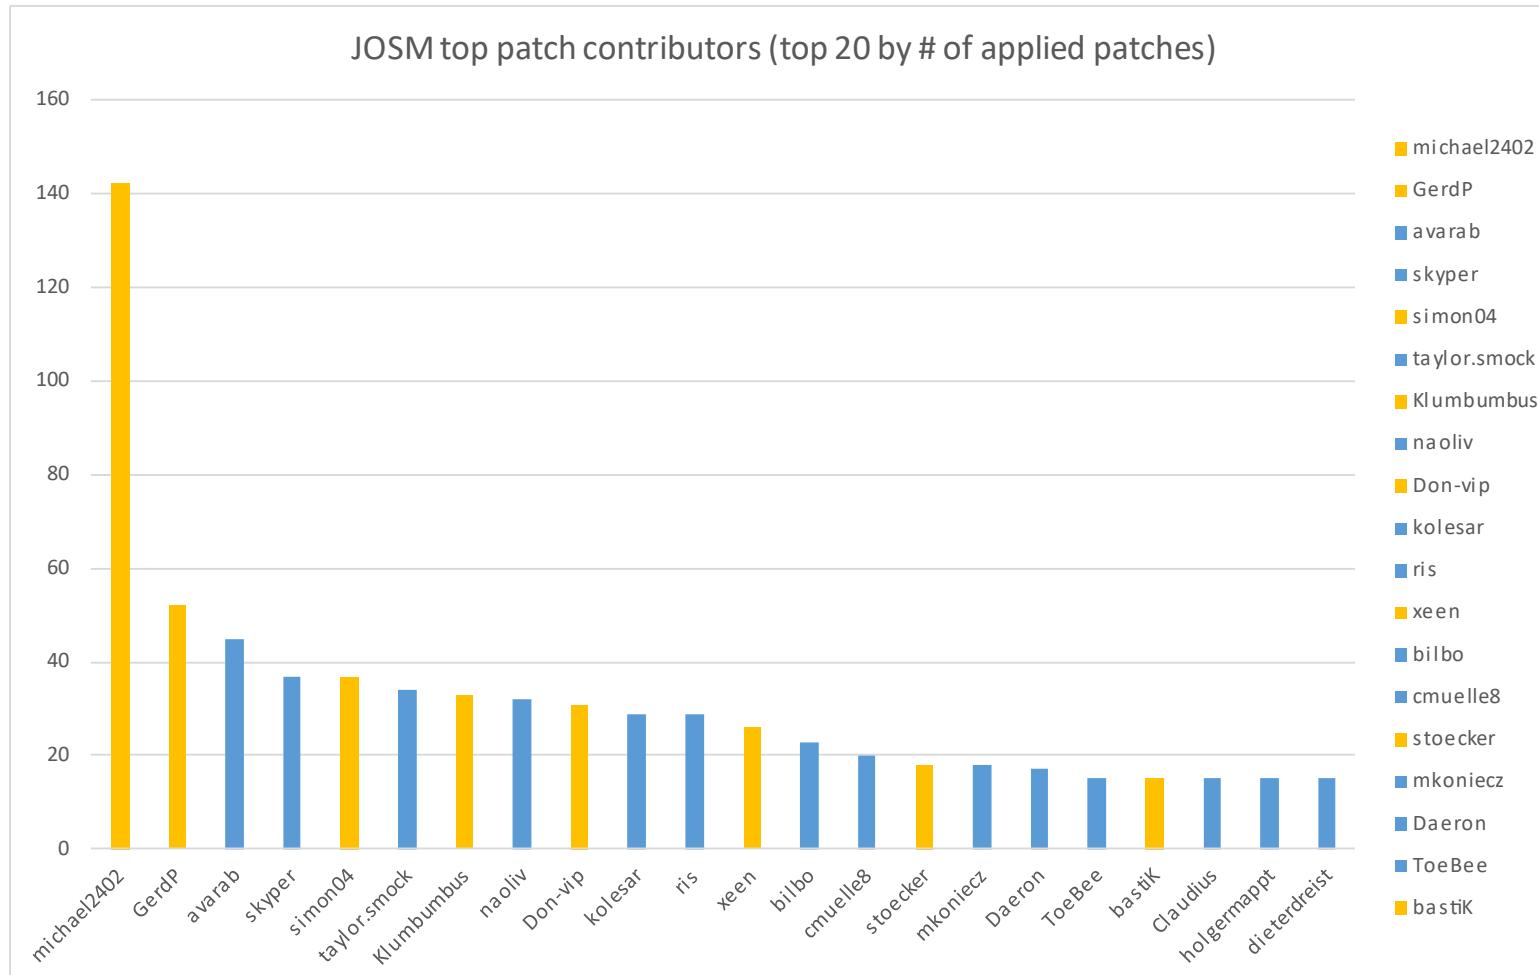

Statistics : Hall of Fame : reporters

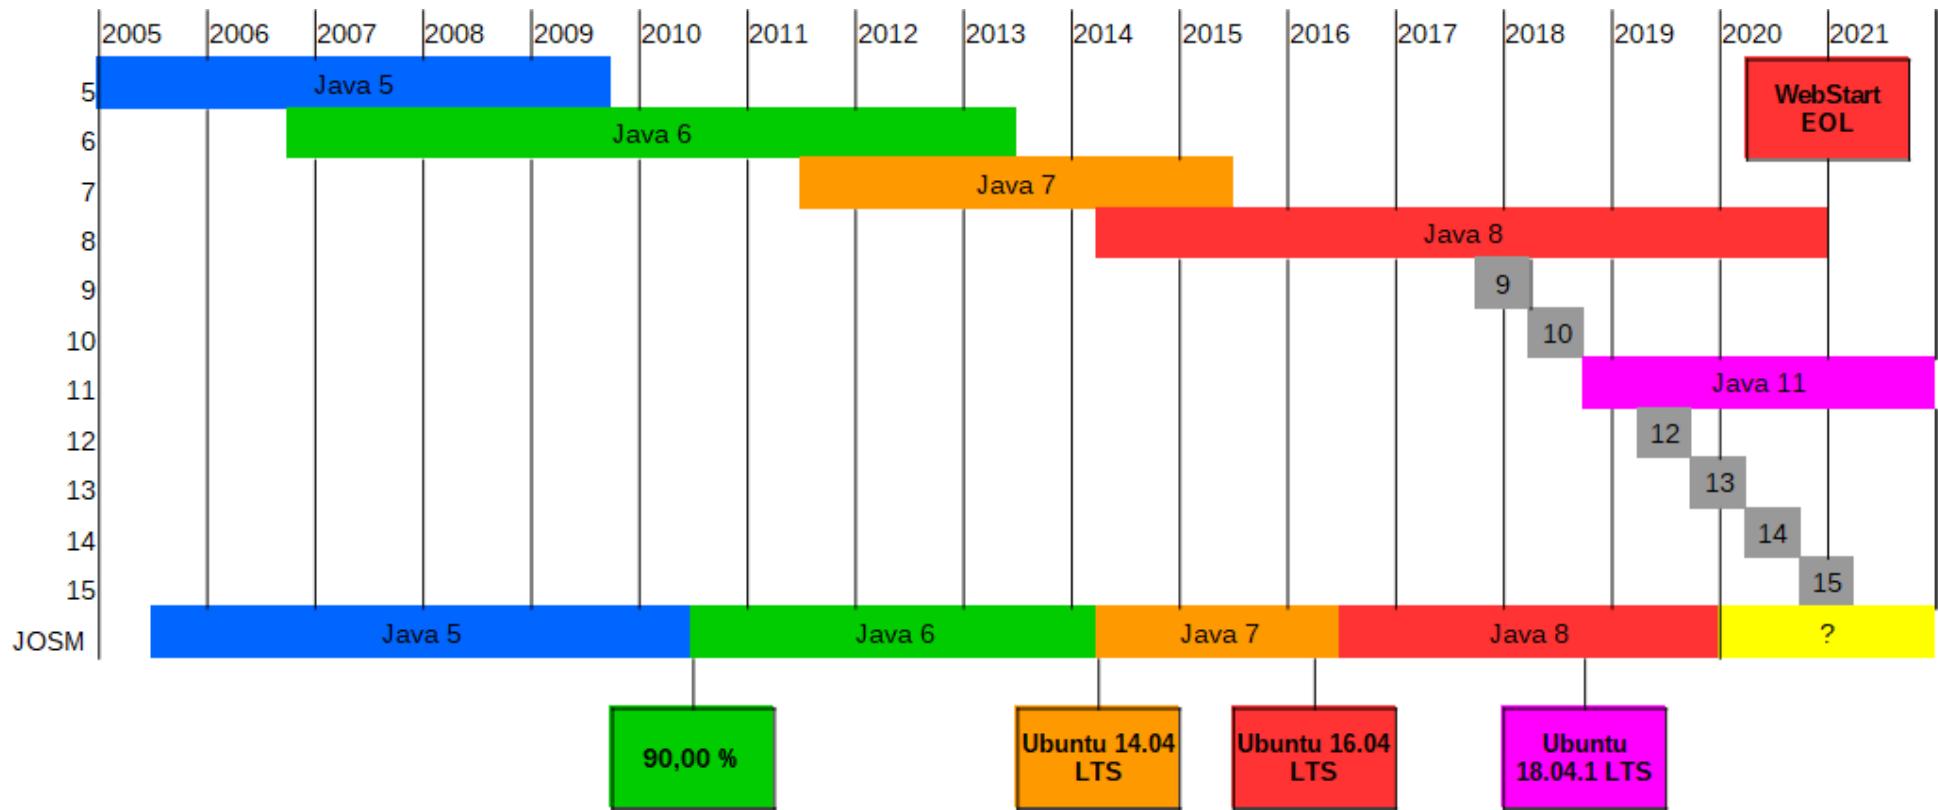

5 users (in blue) have each created at least 150 valid tickets that have been fixed

Statistics : Hall of Fame : patch contributors

7 users (in blue) have each created at least 20 patches that have been applied

Statistics : Java versions

- JOSM migrations done when about 90% of users run the target version
- Twice blocked by the availability of Java in Ubuntu LTS
- Current migration needs a lot of work due to major changes in Java governance

4. Work in progress & to come :)

Modernisation

New server : **done** (thanks FOSSGIS & OSM-FR)

SVN → Git

Scattered repositories → Centralization on dedicated Gitlab

Launchpad → Transifex

Ant → Maven/Gradle

PNG → SVG

(Hack week-end 2018)

Ticket ▲	Résumé
#6887	GitHub out of date
#8645	Migrate translation to www.transifex.com
#15229	modular structure for JOSM core
#16857	Set up gitlab
#16858	Moving jmapviewer to a separate repository
#16859	Tagging nice GSOC tickets
#16860	[PATCH] Remove svn:external for jmapviewer and use Apache Ivy to download jar
#16866	Remove getopt
#16867	Define list of official supported plugins
#16869	Unify preferences API
#16870	JOSM versioning
#16871	Infrastructure migration
#16872	Serialize imagery preferences to string containing XML conformant to maps.xsd
#16944	svn -> git migration script

Modularisation

JOSM is a very big monolith, even with the plugin system

In progress: modularization of core components

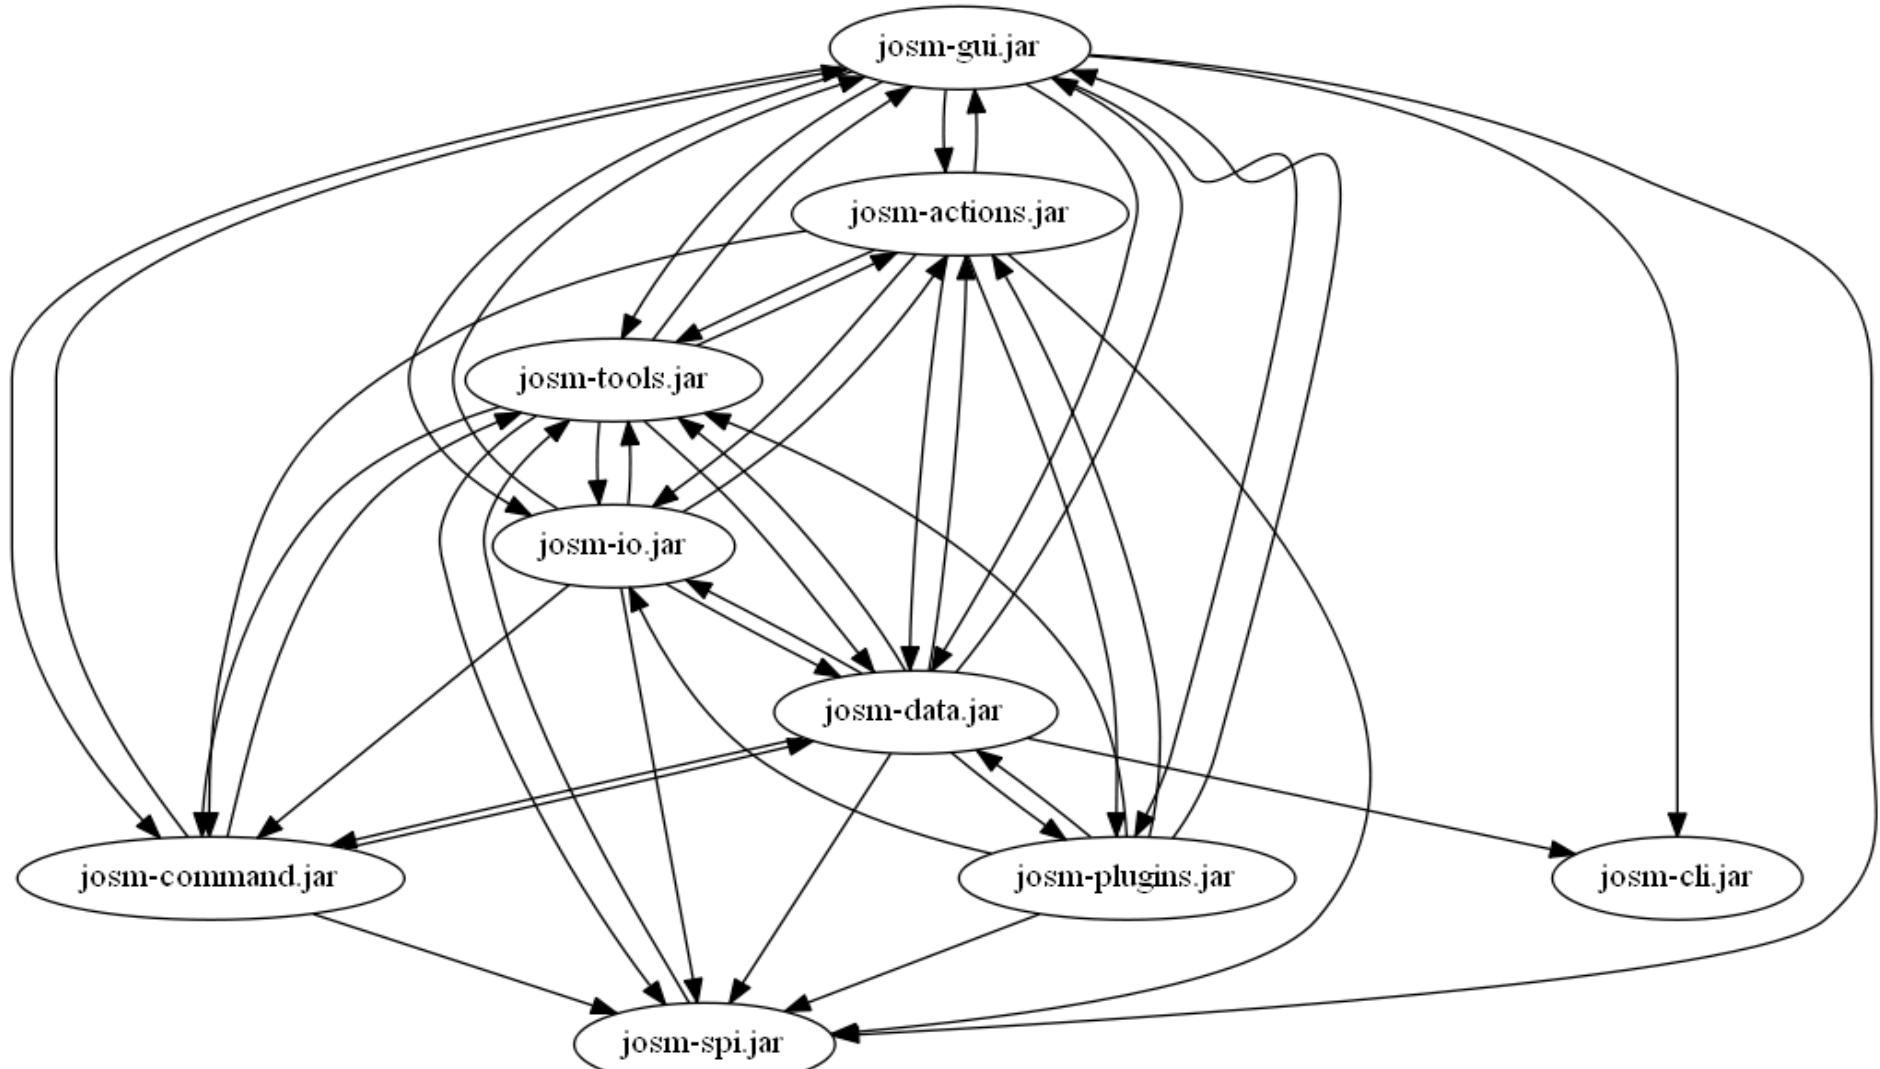

HUGE work (several years)

Inspired by Java 9 (Jigsaw project)

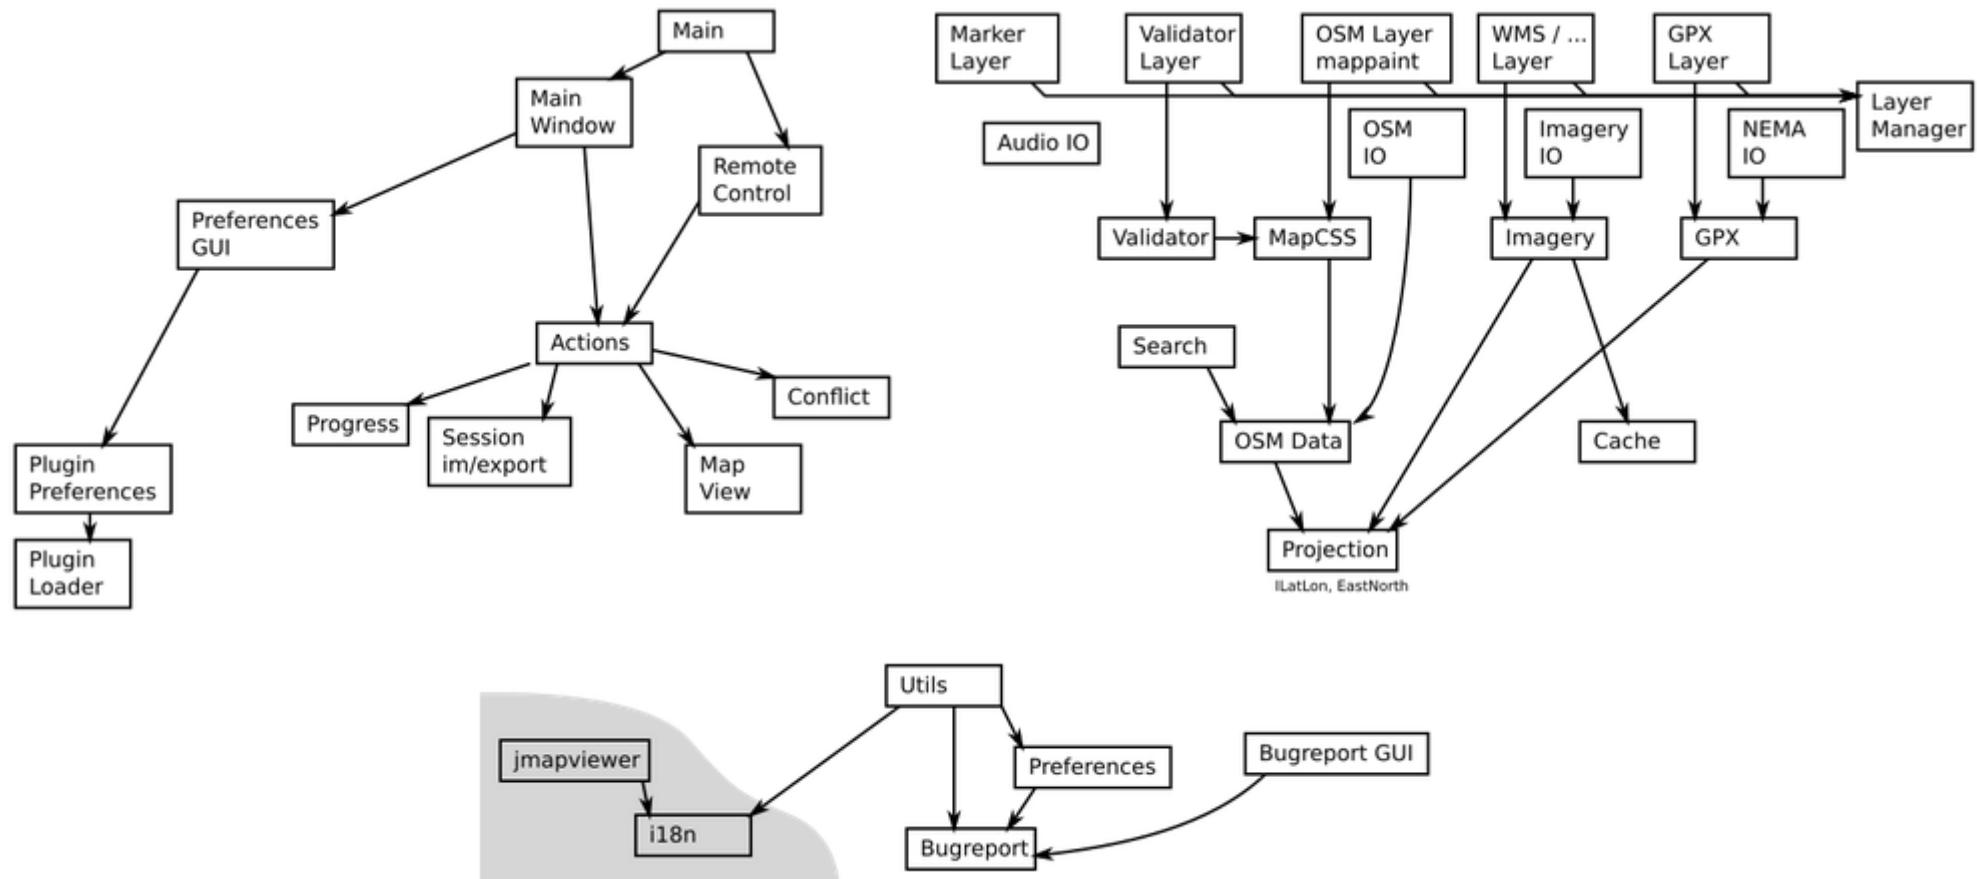

→ Maintenance, reuse

→ <https://josm.openstreetmap.de/ticket/15229>

Modularisation : current state...

Modularisation : target!

Deployment / Java 11 and beyond

Major changes in Java governance (Oracle / OpenJDK)

WebStart (*shamefully*) abandoned by Oracle and **not open source!**

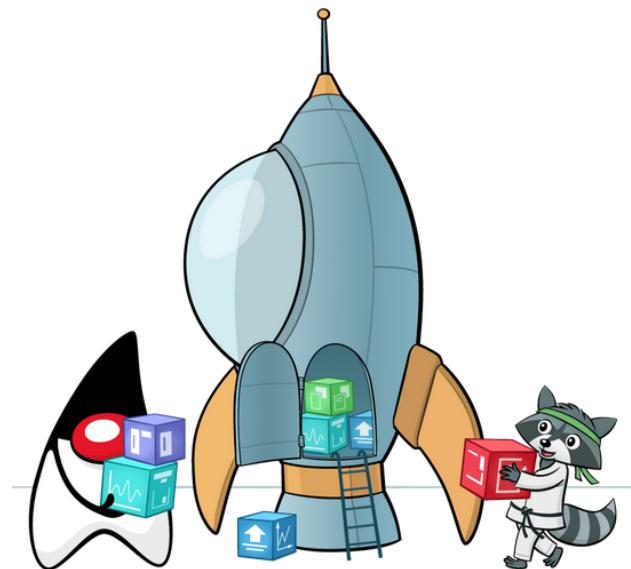

End of Java 8 support for Windows/Mac end users : end of 2020

Options:

AdoptOpenJDK + IcedTea-Web = OpenWebStart

Java 11 Migration + jlink : standalone image

Windows Store + App Store deployment?
